

## **Noctiluca will showcase its next-gen OLED display technology at Display Week 2022**

**29.04 2022 - Polish photonics company Noctiluca SA will present its next-generation OLED emitters during Display Week in San Jose, California, on May 8–13. Display Week is a premier worldwide electronic display industry event that brings together experts from all corners of the globe. Display Week is also the venue for the SID/DSCC business conference, the largest of its kind in the display industry, where Krzysztof Czaplicki, COO of Noctiluca, will present on the company and technology.**

Noctiluca is one of the world's leading companies working on next-generation OLED display materials. OLED emitters are powder-like chemical compounds that form the most important element of modern-day displays (e.g. in TVs, monitors, smartphones, tablets, wearables, and VR and AR devices) and sources of light (e.g. lighting fixtures).

Noctiluca will be presenting some of its technology developments during Display Week 2022, as well as meeting industry audiences for face to face meetings. The event is hosted by the Society for Information Display (SID) and it combines a number of seminars and exhibitions, where the latest technology and advancements from the global electronic display industry are showcased. From AR/VR, auto tech, OLED, micro-OLED and microdisplays to wearables, digital signage and ePaper – and more – Display Week offers a great preview of what's new and what's next.

*“Display Week is a great opportunity for us to showcase our achievements as the event is an annual gathering of the display industry's top players; our potential partners. By participating in the event, we are also engaged in the discussion that is shaping the future of the market” – says Mariusz Bosiak, CEO of Noctiluca*

From day one, the company has been all about creating an international team. The next-generation emitters are developed by distinguished chemists from the company's Polish lab and engineers from Noctiluca's R&D department in South Korea, and the technology is commercialized by the Polish-US business development team.

Noctiluca will be joined at SID by its general advisor - Sri Peruvemba, who has been honored with the 2022 Lewis and Beatrice Winner Award for his service as SID chair of marketing and other SID leadership roles. The Society For Information Display 2022 Honors and Awards are presented to those who have achieved outstanding innovations and offered significant contributions to the display industry.

Noctiluca's technology has drawn the attention of industry giants, and has commenced collaborative work on displays and OLED lighting. As of April, Noctiluca is listed on the Warsaw Stock Exchange NewConnect market.
